PRODUCT INFORMATION	TYPE OF PRODUCT	Tiling
IIII OTIMIATION	COMPANY NAME	Daltile
	PRODUCT/COLLECTION NAME	Colorbody Porcelain/ Torreon
	DESCRIPTION	Tile for floors, walls, countertops and trim
MATERIAL FEEDSTOCK	MATERIAL CONTENT	Crystalline Silica (Quartz), Amorphous Silica (fused)
	RECYCLED CONTENT %	Pre-Consumer: 6.5% Post-Consumer: 0.0%
	RAPIDLY RENEWABLE	N/A
	CONTENT %	IWA
	HARMFUL ADDITIVES	None
	HARMFUL EMISSIONS	None
	EMISSION STRENGTH	None
	OVER TIME	
	TREATMENTS	N/A
MANUFACTURING	MANUFACTURING	The process information below is based on the US manufacturing. These tiles are
	PROCESS	manufactured in Hong Kong and we have no specific information.
		Over 48 million pounds of material that cannot be used to make new tile products was
		recycled in state-approved beneficial reuse programs, including: Land reclamation, Roadbed base material, and Raw material for brick and cement manufacturing.
		A major component of our floor tile products is a by-product from a manufacturing process
		that makes products for the roofing industry, which was formerly disposed of as waste.
		This means Daltile has helped prevent an average of over 175 million pounds per year
		from ending up in our nation's landfills.
		Currently all manufacturing facilities recycle water to a great extent, and we are working
		towards our goal of zero discharge of process wastewater from any of our plants in the
		near future.
		Daltile's eight manufacturing facilities in the U.S. and Mexico provide the opportunity for our products and raw materials to be closer to more building projects, thus conserving
		fossil fuels required for transportation. In addition, we have several strategically placed
		Regional Distribution Centers and Sales Service Centers/Stone Showrooms across United
		States and Canada that allows us to maximize the volume of every truckload for the most
		efficient transportation our products. Further, a fuel saving device is being applied to
		reduce fuel consumption by 10%-20% and emissions by an average of 50%. Additionally,
		our manufacturing operations use clean-burning natural gas as an energy source in all of
		our kilns, which minimizes air pollution. No fuel oils or coals are utilized. Manufacturing plants have reduced natural gas demand over 8% in the last two years.Our holistic
		corporate approach to conservation has included innovative modifications to air

		hard surfaces, it won't likely be replaced for decades.
	END OF SERVICE LIFE	Tile may be recycled see above information
MISC. PROPERTIES	QUALITIES/PROPERTIES OF PRODUCT	Durable, long lasting
	MISC. COMMENTS	Suitable for exterior floors, including pool decks, and walls in freezing and non-freezing climates when proper installation methods are followed. Suitable for industrial installations requiring high compressive strength.
		We do not recommend light colored quarry tile in commercial kitchens unless properly sealed. It is necessary to follow the proper procedures and recommendations from the grout and maintenance products manufacturers.
		Special care should be taken when grouting with dark pigmented colors. A grout release is recommended to prevent finely powdered pigments from lodging in the pores of the tile surface.
		Suitable for use on ramps when ordered with abrasive.

MAINTENANCE	AFTER INSTALLATION	Ceramic Tile - Routine Care Glazed tile products should be cleaned routinely with an all-purpose, low VOC household or commercial cleaner. A multipurpose spray cleaner, which removes soap scum, hard water deposits, and mildew designed for every day use, can be used on wall tile areas in residential baths and showers. The entire area should be cleaned and scrubbed with cleaner solution through the use of a cotton mop, cloth, sponge, or non-metallic brush. The entire area should be rinsed with clean water to remove any cleaning solution residue. Remember that you should sweep or vacuum floor areas prior to cleaning to remove any dust or debris. Routine cleaners should never contain hazardous or polluting products including, but not limited to acids or ammonia. Acids can damage the grout and the glazed surface of the tile, and ammonia can discolor the grout. Unglazed tile should be cleaned routinely with concentrated tile cleaners that have a neutral pH for safe regular use. These cleaners are better suited at removing grease, oils and normal spills from unglazed products. Again these products will vary depending on the application, amount of traffic and the use. The product chosen should also be compatible with cleaning the grout joints at the same time. Grout Maintenance: When heavy duty grout cleaning is required, you will need to use a professional strength Tile & Grout Cleaner that is capable of removing grease, soap scum, body oil, mildew stains, algae, and synthetic or acrylic waxes from the grout joints. However, such a product should contain non-polluting chemicals and low VOC levels. Grout Color Restoration: When grout has been stained to the point that it cannot be maintained or returned to its natural color, you can return the grout back to its original color or any other color through the use of a "grout stain". Prior to staining, the grout joint should be cleaned thoroughly to
