HARMFUL EMISSIONS EMISSION STRENGTH OVER TIME TREATMENTS MANUFACTURING MANUFACTURING MANUFACTURING PROCESS MANUFACTURING PROCESS MANUFACTURING PROCESS We produce mainly SBR rubber products, we use heat, steam and pressure to vulcarize the rubber into different forms — wall base, tile or stair reads. We are careful to run our lines in as efficient marmers as possible, which includes initiatives such as running higher use lines during off peak hours and recycling our water for the steam function. Our main waster management strategy is to eliminate the waster from the cycle. However, since that is not always possible, we have implemented zero landfill policy. We utilize the same IMPACT program that is offered to customers within our own manufacturing processes and it has been quite successful in minimizing, and almost eliminating the landfill option that was heavily relied here for many years. I would also add that our small community does not offer a public recycling program, but our employee's college students. This has been a very lucrative fundratiser for our kids who earn at least \$1000 per student each summer for the next school year. HARMFUL EMISSIONS HARMFUL EMISSIONS LOCATION OF MANUF. MAINTENANCE	AFTER INSTALLATION	Do not buff, scrub, or mop for 48 hours after installation.
		Roppe Recoil Fitness Flooring can be cleaned much like carpeting.
		Daily vacuuming is encouraged to keep dust to a minimum.
		3. If the flooring cannot be fully cleaned with a vacuum, a damp mopping
		with a mild soap and water solution will usually be sufficient.
		a) It is important not to get the flooring too wet as this may have an
		adverse affect on the adhesive system employed.
		b) Change the soap and water solution often!
		4. Use a wet vacuum to remove excess water from the flooring.
		5. Be sure to use a clean mop. This will keep your floor smelling fresh and
		clean.
