<b>MANUFACTURING</b>	<b>MANUFACTURING PROCESS</b>	We continue to shrink our manufacturing footprint—significantly reducing the amount of resources we use while increasing our recycling and reuse of waste. But we're not stopping here. We're going after very aggressive reduction targets over the next 8 years. Already, we've seen real progress towards our 2020 goals of 25% reduction of our intensities related to energy, greenhouse gases, water, and waste-to-landfill. What are intensities? They're a measure of the amount of resources needed to create our products. So far, our biggest improvements have been in water and waste-to-landfill intensities—with impressive decreases of nearly 9% and 7% respectively.
