<b>LIFE CYCLE ANALYSIS EXTRACTION</b>	Life-cycle analysis is a detailed process that evaluates the environmental impact of a textile at each stage of its life cycle. The EU Flower label, independently verified and endorsed by the European Commission, is awarded to products that have undergone a rigorous life-cycle analysis and meet specific ecological criteria.						
<b>END OF SERVICE LIFE</b>	Maharam does not make claims that could misrepresent the environmental attributes of its products. At this time, a national infrastructure to collect and process textiles at the end of their useful lives does not exist. For this reason, Maharam does not claim that any of its products are biodegradable or recyclable. Maharam supports industry initiatives to develop these facilities, but until such a system is in place, Maharam's position is to not label its products as either biodegradable or recyclable. Maharam's cardboard packaging materials are readily recyclable.

<p><b><u>MAINTENANCE</u></b></p>	<p><b>AFTER INSTALLATION</b></p>	<p>Vacuum regularly using the proper attachment to avoid pilling.  Treat stains promptly. The longer a stain remains on the textile,  the more difficult it will be to remove. A professional furniture  cleaning service is recommended.  Always pre-test any cleaning method in an inconspicuous area.  Several light applications of a cleaning agent are less harmful  than a single concentrated application. Repeat stain treatment  several times if necessary.  Never use heat to clean textiles. Heat can set stains.  Do not use agents containing bleach. These agents may cause  discoloration over time.  Do not over saturate the textile or let water pool in seams.</p>
